

SNOWSHOES

English

(SSL)

2018/19

GO YOUR OWN WAY...

Go your own way. This isn't just a motto; this is our way of life. This is what drives us, what makes us different. In short, this is our DNA.

Going your own way means creating sports activities which take you out into nature.

More than 30 years ago, we created the snowshoe recreational market by offering our customers smart, high-quality products. A decade later, we launched the Nordic walking market in France, Italy and Spain with a full range of poles bursting with innovations.

10 years after that we developed our Yooner activity so that everybody, fans of skiing or not, can discover new snow sensations and have fun out on the slopes.

Going your own way means producing your products in France and committing to eco-design

We've built our company from the ground up in the heart of the Aravis (Haute-Savoie, France). The mountains are our natural habitat, our passion, our source of inspiration, and our laboratory. We care about sustainable development and we're aware of just how fragile our environment is. This is why we've always manufactured every single one of our snowshoes, sleds, poles and Yooners in France. From the preliminary product design stages, we're always looking to optimize our environmental performance by minimizing our impact (material consumption, transport, use, recycling...). Lastly, by keeping all of our production close to hand we can react to any issue arising from manufacture or customer service because we have full control over the entire production process (from plastic injection to final assembly). Thanks to our industry expertise, modern production tools and innovative manufacturing processes, we've been able to cement our position at the pinnacle of our field.

Going your own way means gaining a reputation for constant innovation.

The taste for innovation lies at the very heart of who we are. It runs through our team of developers, testers, professionals and passionate men and women who live for the mountains and seek excellence above all else. For every one of our products, we invent innovative new concepts and work to perfect high quality products which genuinely meet your needs. We're creators, not followers. This is why we've already filed more than 60 patents around the world and won a number of awards to demonstrate the respect we've earned in our field.

Going your own way means going there together.

Our authenticity, our unique culture and our values have enabled us to forge a close, trusting relationship with you for more than 30 years. Together we share the passion for the mountains, for real fresh air, for great products, for strong emotions and for shared dreams. We'd like to thank you from the bottom of our hearts for putting so much faith in us.

And now? It's up to you to go your own way.

We're delighted to present all of our products to you. They will be the most loyal companions you could ask for, letting you take full advantage of all the joy of the mountains. Use them to explore, discover, feel, breath, escape and wonder. That's our greatest satisfaction: putting you in complete harmony with nature.

Go your own Way...

**made in
FRANCE**

All snowshoes of this classic range have been designed and developed for each type of consumer to find the pair corresponding to their specific use. They are made entirely in France with TSL in total control of our production (plastic injection to final assembly) ; This ensures high quality products as well as superior after-sales service.

THE IMPORTANCE OF THE FRAME SURFACE.

You should choose the deck size according to your size and the snow conditions. The greater the weight of the walker, the wider the deck required to bear the weight.

All of our adult frames (Hyperflex, 3D design, classic) are available in a range of sizes.

**natural
walk**

All of our narrow-waist snow-shoes have been tested in the most extreme temperatures. The special shape (TSL patented) enables you to maintain a normal gait.

THE FRAME AND GRIPS

Hyper-flexible and lightweight with an ergonomic binding, the Symbioz adapts to the unevenness of the terrain to give extraordinary traction. The inserts provide elasticity and responsiveness and to offer a feeling of freedom.

HYPER*flex*
concept

REINFORCEMENTS

For the first time, TSL has used a design containing reinforcements each having their function that are essential to the effectiveness of the Hyperflex concept. They support the product's distortion constraints during walking and give the Symbioz its overall qualities: flexibility, rigidity, elasticity and light weight.

CARBON

Carbon reinforcements store energy during the flexing phase and restore it at the end of the stride to increase stride power and reduce effort and vibration. Distortion of the **SYMBIOZ ELITE** and **SYMBIOZ HIKER 2** frame is progressive, responsive, precise and uniform in both the bending and twisting phases.

THERMOPLASTIC

Thermoplastic reinforcements support the **SYMBIOZ ACCESS** and the **SYMBIOZ MOTION 2** distortion constraints to provide a natural stride in both the bending and twisting phases.

TEXALIUM

Texalium reinforcements, like carbon fibre, support the Symbioz' distortion constraints. They allow effort to be transmitted evenly across the whole frame to provide a natural stride in both the bending and twisting phases. They give the **SYMBIOZ STEP-IN** a high level of elasticity for harmonious suppleness and excellent stride absorption.

Our different prize

TSL OUTDOOR was awarded a prize by the Design Observer from APCI (Agency for the Promotion of Industrial Design), Inosport, Backpacker (USA) and Bref Rhône Alpes Trophée for its Symbioz Elite. The prize award reinforce TSLs determination to progress in order to provide consumers with even more innovations.

HYPERflex_{concept}

NEVER HAS A SNOWSHOE OFFERED SUCH OUTSTANDING GRIP.

Combined with the vertical blades, the stainless steel bidirectional crampons placed under the foot give incredible traction (uphill), excellent grip (downhill) and perfect drift control (incline). The flexible frame follows the shape of the terrain, provides superb stability and complete safety to avoid sudden sliding in powder snow.

stainless steel
Alpine Style
CRAMPONS

3D design

These decks benefit from variable height edges providing better grip on downhill slopes and great traction in all types of snow (TSL Patented).

Icy snow

Packed snow

Soft snow

**STAINLESS
STEEL
GRIPS**

GRIP

The 3D Design snowshoes use 6 interchangeable tips (8 for 418/438) and front points for excellent grip. The Grips models, fitted with lateral stainless steel blades, optimise the grip on these models.

FRONT TEETH

The front teeth provide maximum traction on steep slopes.

CLAWS

The 8 independent, abrasion-resistant stainless steel crampons (similar to mountaineering crampons) are always located under the foot's pressure points, no matter the size of your foot. They grip is unbeatable.

VERTICAL BLADES

The vertical blades provide superb traction and control on inclines or steep slopes in soft or compact snow.

CLASSIC

These robust and rigid frames are perfect for treks on gentle slopes. They are fitted with 6 interchangeable crampon tips and front points for very excellent grip.

HEEL LIFTS

Adaptable to any foot size, our climbing bars offer an average angle of 12° and are always located right under the heel. Because there is no direct contact with the shoes, pressure points are non-existent.

Going uphill, the device lifts the heel. Going Downhill, the back of the binding goes under the deck in order to keep the foot flat, preventing the foot from jutting out at the front of the shoe.

 **easy ascent**

CLASSIC

All TSL snowshoes have a Sound and shock absorbing System (TSL Patented).

BINDINGS

GLOBAL MEMORY FIT BINDING.

TSL is the only brand of snowshoes to provide a complete memory of the shape of the shoe (size and front volume). This gives excellent control of the foot across a wide range of sizes and in all types of situations. Once these pre-adjustments have been made, the snowshoe can be put on easily and quickly before each outing.

GLOBAL MEMORY FIT BINDING

DEVICE WITH PRESET MEMORY

LOCK ADJUSTMENT (TSL Patented)

Just activate the locking system and slide the heel support to the correct position. It will now maintain this setting.

DEVICE WITHOUT PRESET MEMORY

RAPID ADJUSTMENT

Quick shoe size adjustment by simply pushing the heel piece.

BINDINGS

FRONT TIGHTENING

MEMORY LOCK SYSTEM

(TSL Patented)

Volume memory, with a final buckle to tighten it onto your foot.

STRAP TIGHTENING

Front classical tightening with strap.

MEMORY FLEX SYSTEM

(TSL Patented)

Flexible volume memory with a lateral pre-adjust.

LATERAL ADJUST

(TSL Patented)

Lateral adjustment to fit perfectly to your foot and memorise its volume.

BACK TIGHTENING

ANKLE PRE-ADJUST

Enables you to centre the comfort strap on your instep and permanently set its position.

BUCKLE TIGHTENING

Our bindings include a ratcheting buckle system.

COMFORT STRAP

Enables you to optimise the contact zones around the ankle strap, providing improved comfort and support.

SYMBIOZ elite

The Symbioz ELITE has the top of TSL technologies : Hyperflex Concept, carbon reinforcements for excellent elasticity and responsiveness, exceptional grip and flexible binding with the «Global Memory binding» Concept. It is intended for enthusiastic snowshoers who wish for the best to go in all kinds of terrain and snow.

SYMBIOZ racing

The Symbioz Racing has been specially designed for high-speed snowshoe enthusiasts. Their extreme flexibility offers a completely natural-feeling stride, fantastic weight transfer and unparalleled lightness (320g/0.70lbs per foot), making these snowshoes a natural extension of your body.

NATURAL STRIDE

The Hyperflex Concept frame gives you a completely natural foot-strike and propulsion, ensuring that your stride is as natural as possible for maximum grip on both your snowshoes and the snow. Thanks to its shape memory, these snowshoes store energy when flexed and release it at the end of your stride.

TSL'S CUSTOMER SERVICE

At TSL, our main goal is the user's satisfaction throughout the product's lifespan. For this, we do everything we can to maintain and improve the quality of our Customer Service Department.

From the design of our products by insuring the parts can easily be replaced.

By guaranteeing proximity and responsiveness of care thanks to our French production.

By offering a 2-year guarantee (parts and labour) and also providing a 10-day repair service.

By providing all our retailers with a Customer Service Department catalogue and details of repair procedures.

ACTIVATING THE GUARANTEE:

We give our consumers the option of registering their products on our website to facilitate the implementation of their guarantee, to find out about new products and features and to benefit from improvements to our products.

TSL NETWORK

Development of the activities and services offered is important at TSL:

Full information on our products, the brand and our innovations...

On-line details of marked and secure snowshoe trails in France.

Listing of ski resorts that allow the Yooner on their slopes.

A Pro space with catalogues, documents, product photos, videos and prices for free download...

TSL: partners or organisers of snowshoe, Yooner, Nordic walking and trail events...

Two Facebook pages for information concerning the latest news fresh from TSL.
A Youtube channel with explanatory videos and our products in context.
